ETL tools have been around for two decades, and are extremely helpful in defining and automating complex ETL processes. Incumbent ETL tools include Informatica PowerCenter and IBM InfoSphere DataStage. There are newer cloud-based tools which can help set up ETL processes in a few clicks—these include Stitch and Blendo. The ETL Process. The traditional ETL process is based on batch processing. ETL jobs run daily, weekly or monthly, and process large volumes of data from source systems.

ETL stands for Extract, Transform and Load. An ETL tool extracts the data from different RDBMS source systems, transforms the data like applying calculations, concatenate, etc. and then load the data to Data Warehouse system. The data is loaded in the DW system in the form of dimension and fact tables.
